Sunnybrook Hospital Specifies Class 1's Engineered Infection Prevention Technology

Class 1 Inc. is pleased to announce that Sunnybrook Health Sciences and the Ontario Ministry of Health and Long Term Care have specified Class 1's award-winning Engineered Infection Prevention (EIP) technology as a safeguard for immunocompromised patients for the new Sunnybrook Complex Malignant Hematology Program – Headstart Project.

The technologies selected include Asept.1x AutoUV providing self-disinfecting bathrooms and SmartFLO3 self-disinfecting hand-hygiene sinks. These Canadian technologies, were made possible by a collaboration between Class 1 (Cambridge), Franke Kindred (Midland), and Sanuvox (Montreal). The programmable sink auto flushes and generates ozonated water to keep surfaces and drain traps free of pathogens, including CPEs & CREs known to have a 50% mortality rate. The AutoUV system flashes the patient bathroom immediately after each use effectively reducing the risk of spread of disease including the flu, norovirus, adenoviruses, C. difficile, MRSA, and VRE.

1 in 10 Canadian patients currently acquire a Hospital Acquired Infection (HAI). EIP is believed to be a game changer in healthcare with the potential to significantly reduce HAIs, shorten average length of stay, free up hospital beds, and save millions of healthcare dollars.

Class 1's EIP was awarded a 2017 Top 10 World Patient Safety Innovation by the Patient Safety Institute. The new Sunnybrook Haematology unit is scheduled to open in Fall 2018.
